VERITAS AI

Real-Time Misinformation Detection & Filtering

Analyzed. Verified. Delivered.

THE NOISE

INFORMATION OVERLOAD

The modern news ecosystem is flooded with sensationalism, spin, and unchecked bias.

SPEED OF LIES

Misinformation spreads faster than truth — shared millions of times before corrections appear.

NO VERIFICATION TOOLS

Readers lack real-time tools to instantly verify the content they are consuming.

VERITAS AI

An AI-driven Natural Language Processing system designed to cut through the noise.

01	**Identifies Patterns**	Detects linguistic patterns and stylistic markers associated with fake news and disinformation.
02	**Real-Time Filtering**	Filters out misinformation as it appears — before it reaches the reader.
03	**Curated Feed**	Delivers a clean, verified feed of legitimate, market-analyzed news content.

PLATFORM CAPABILITIES

Fullscreen Reader

Distraction-free, immersive article feed designed for deep reading without noise.

Live Verification

Cross-references data against live internet RSS sources in real-time as news breaks.

Bias Detection

Deep text analytics to flag sensationalism, emotional manipulation, and loaded language.

Local ML Showcase

End-to-end training and inference API built for transparency and reproducibility.

UNDER THE HOOD

Built for speed, accuracy, and scalability using a modern Monorepo structure.

veritas-ai — tech stack

```
$ frontend    →  React + Vite   (TypeScript, CSS)

$ backend     →  FastAPI        (Python)

$ ml_pipeline  →  Custom NLP     (Training + Inference)

$ api_endpoints  →  /api/verify  +  /api/model/infer

$ architecture  →  Monorepo      (Modular, Scalable)
```

THE PIPELINE

01 INGEST

Fetches real-time articles via live RSS feeds from multiple trusted sources.

02 ANALYZE

ML model scans for sensationalist linguistic patterns and manipulation markers.

03 FILTER

Ranks and removes unverified or fake content using confidence scoring.

04 DELIVER

Presents only legitimate, objective news to the reader in a clean feed.

WHAT'S NEXT

01 Edge-Case Training

IN PROGRESS

Expanding training datasets to cover nuanced edge cases, regional misinformation patterns, and cross-language detection.

02 Browser Extension

PLANNED

A lightweight browser extension enabling on-page live filtering as users browse any news site or social feed.

03 Market Sentiment

ROADMAP

Enhanced market sentiment analysis to flag financial misinformation and link news credibility with market data.

VERITAS AI

Empowering readers with the truth.
